ADVISORS

Jason Schmitt
Special Advisor to the Board of
Directors,
EPIC Academy Charter School

Linsey Rubenstein
Vice President of Information
Technology
The Boeing Company

Iqbal Arshad
Former Senior Vice President
Engineering,
Global Product Development,

PROBLEM

Increasing Air traffic

More congestion at the airport terminals

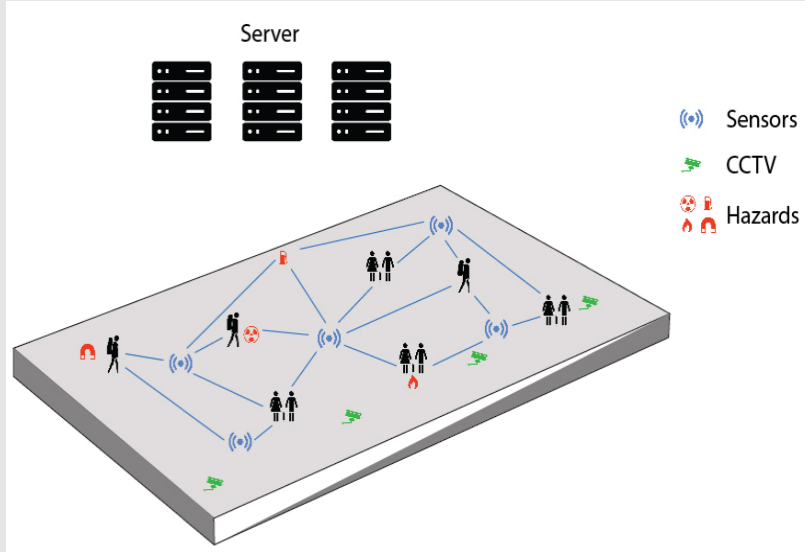

"Airports are among the
"MOST VULNERABLE"
soft target and likely always will be."
– CBC News

"Attackers may have exploited
relatively **LIGHT SECURITY** at the
ENTRANCE to the arrivals hall."
– CNN

SOLUTION

- Sensor based trackable security system.
- GRID network system across whole airport.

Radioactive materials

TSL2561 Luminosity Sensor

Flammable liquids

MQ-3 Semiconductor Sensor for Alcohol

Magnetised materials

MQ-2 Semiconductor Sensor for Combustible Gas

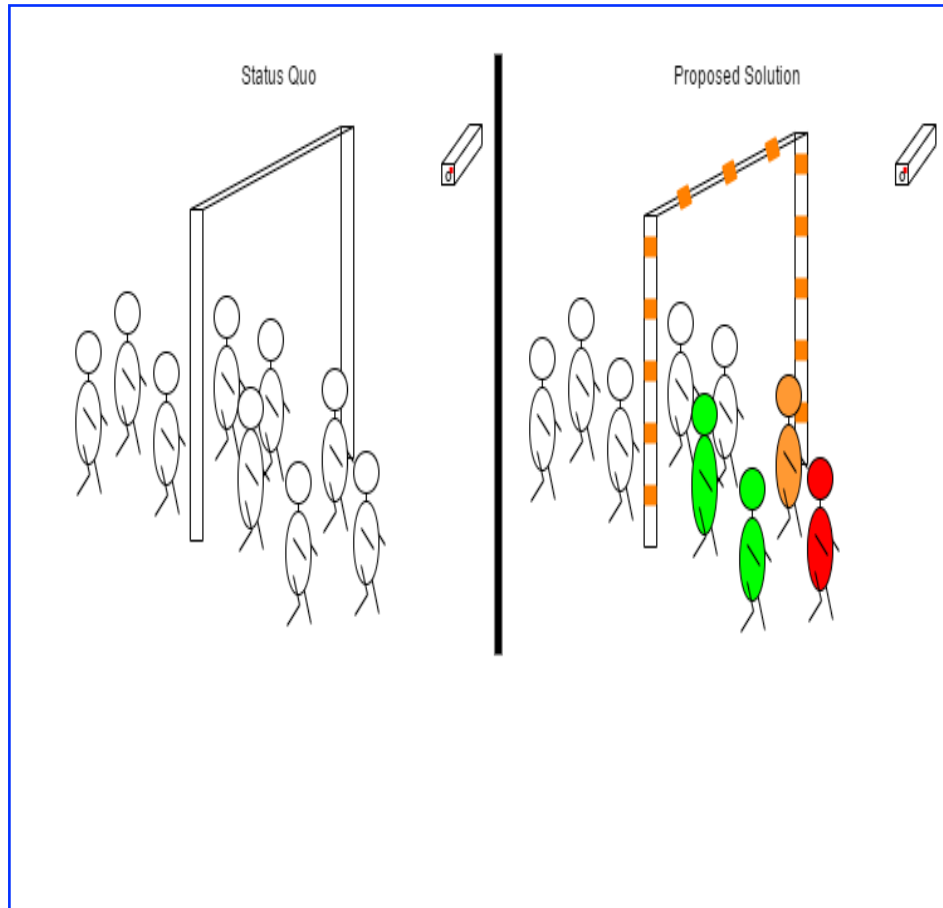

Gases

Compass Module 3-Axis HMC5883L

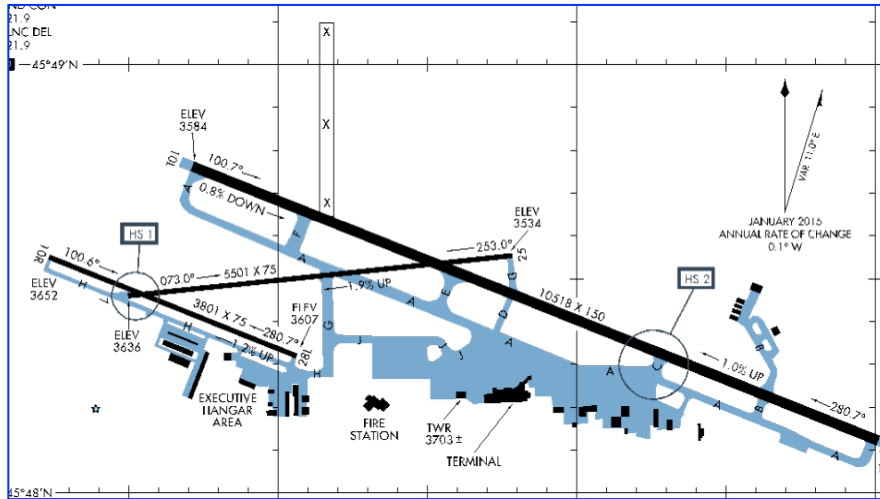

SOLUTION

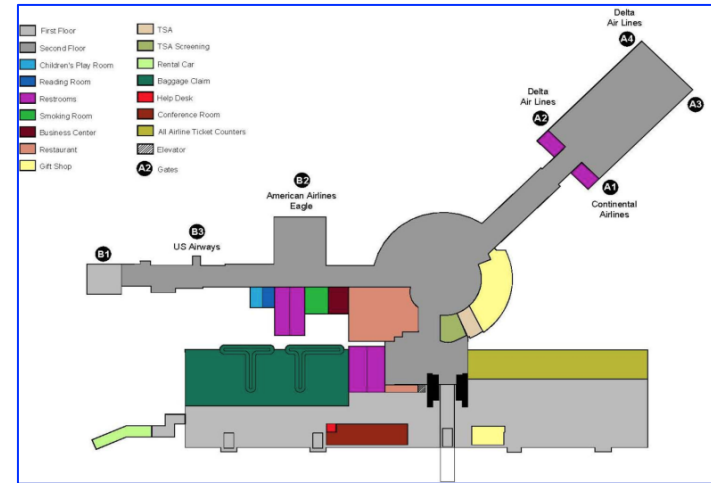

CHICAGO O'HARE AIRPORT Terminal 5

TARGET MARKETS

CODE	NAME	CITY	STATE
BTR	Baton Rouge International Airport	Baton Rouge	LA
BIL	Billings Logan International Airport	Billings	MT
AMA	Amarillo International Airport	Amarillo	TX
COS	Colorado Springs Airport	Colorado Springs	CO
ACY	Atlantic City International Airport	Egg Harbor Twp	NJ

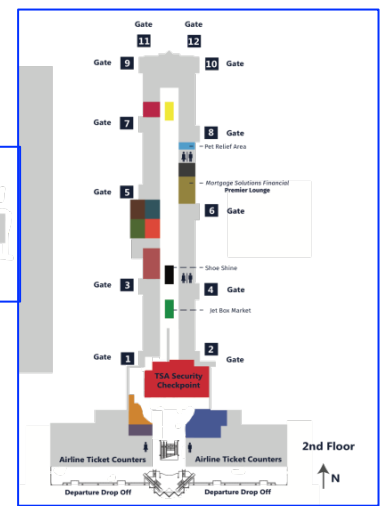

Billings Logan International Airport

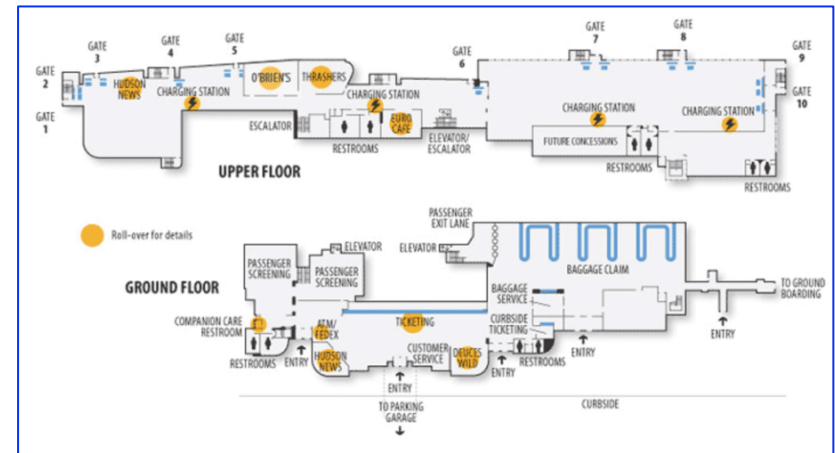

Baton Rouge Metropolitan Airport

AMARILLO INTERNATIONAL AIRPORT

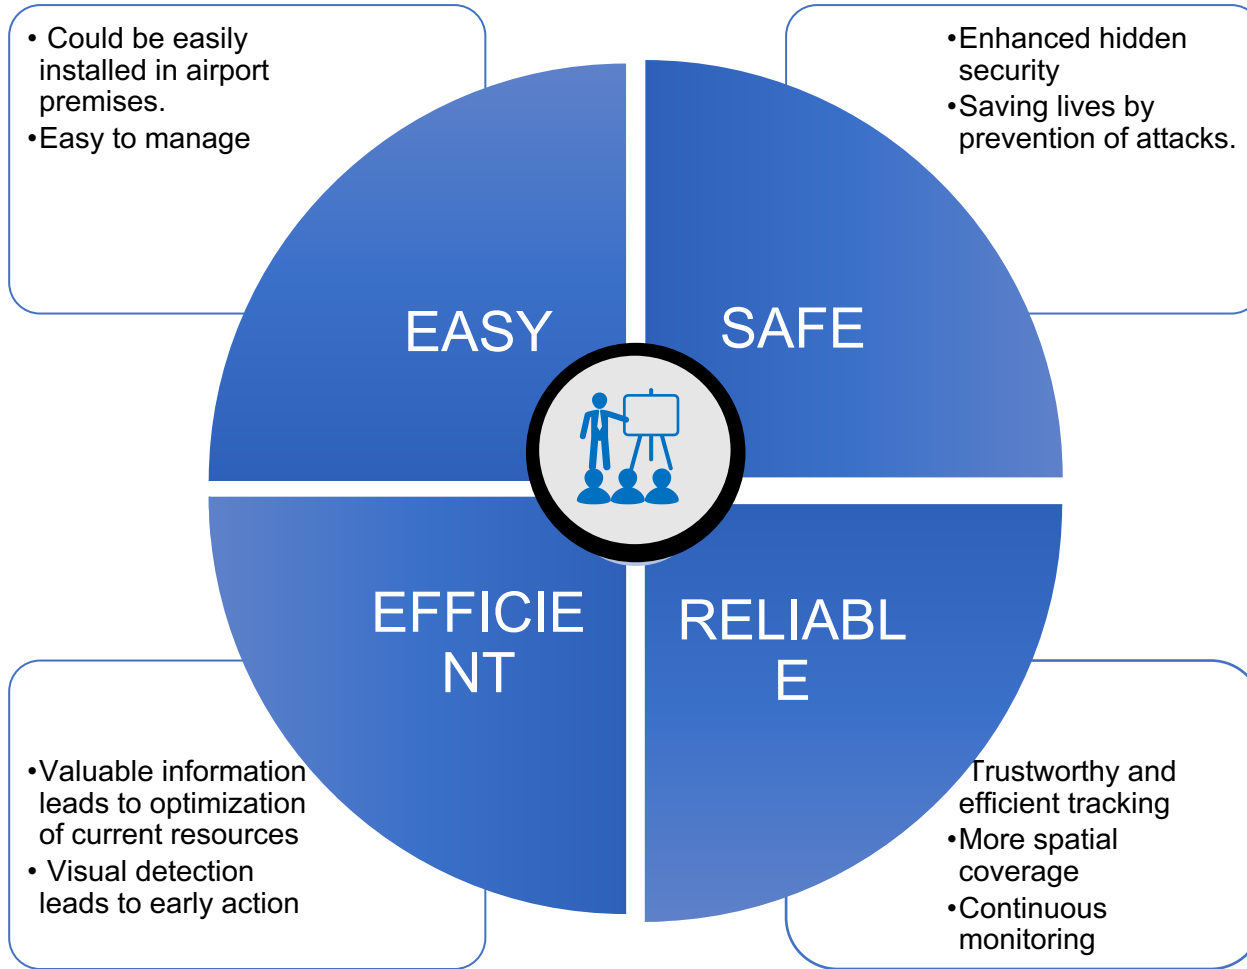

COLORADO SPRINGS AIRPORT

ATLANTIC CITY INT. AIRPORT

VALUE PROPOSITION

VALUE CHAIN

SUPPLIERS

- Sensor Suppliers
- Server Suppliers

PRODUCT DEVELOPER

- Tracking Software
- Product Development
- Maintenance Suite

SECURITY AGENCIES

Transportation
Security
Administration

- Tracking Activities
- Responsible for Action

COMPETITIVE ADVANTAGE

1st to Market with Distinctive Competency

Scope and opportunity

Similar devices exist- but none in CLAEM target market

Driving Product and Service innovation

Airport security infrastructure advanced

Superior Responsiveness

Reaction time to the threats is very less

Optimizing Improvement

Software real time data feed leads to security optimization capabilities.

REVENUE MODEL

With a 100% gross margin on sensor packages

CLAEM

*Cost for fitting out a
Smaller Airport:
\$91,621

CLAEM

*Cost of Deployment
in 5 Smaller Airports in
2017:
\$458,106

Revenue in 2017:
\$550,000

Profit: \$51,678

* CLAEM offering Cost is inclusive of a 5 year maintenance contract with the airports along with software licensing.

CHALLENGES AND RISKS

Investment Risk

Technology Protection

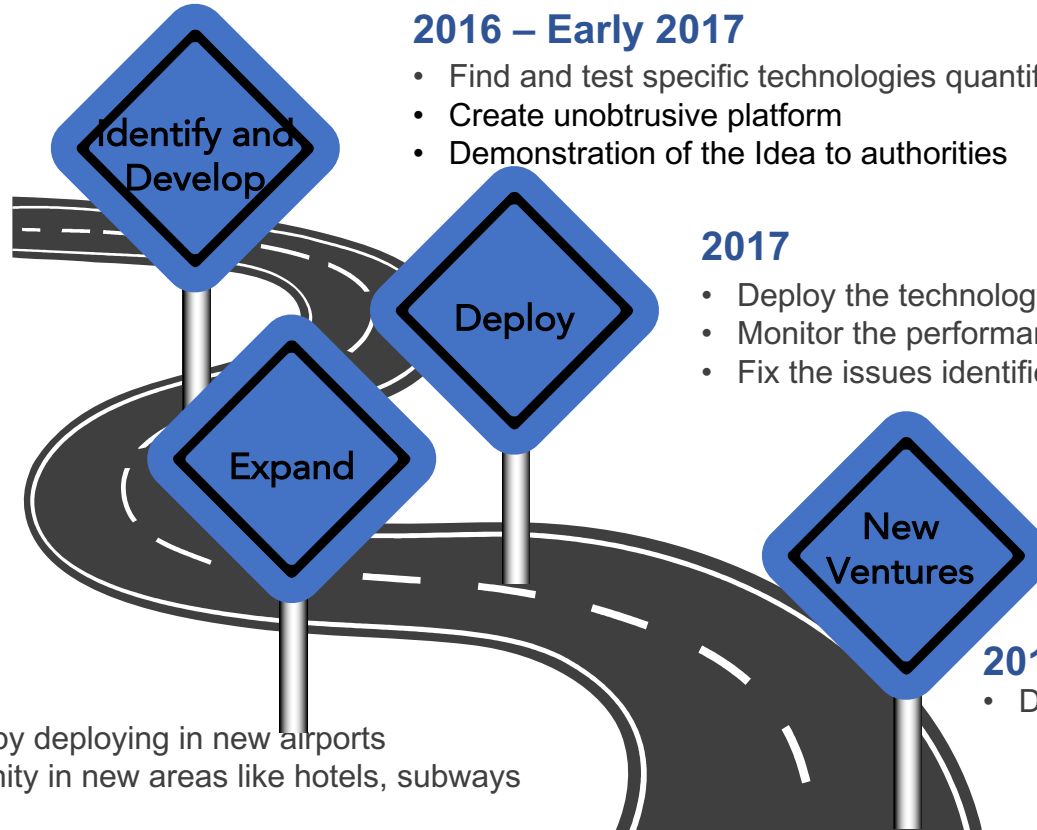

Regulation Authorities

Competitors

NEXT STEPS

2016 – Early 2017

- Find and test specific technologies quantifiably
- Create unobtrusive platform
- Demonstration of the Idea to authorities

2017

- Deploy the technology at 5 identified smaller airports
- Monitor the performance closely for 3 months
- Fix the issues identified during deployment phase

2018

- Expand the business by deploying in new airports
- Exploring the opportunity in new areas like hotels, subways

2019

- Deployment in new identified areas

TECHNICAL VIABILITY

Diffusion

$$\frac{\partial u}{\partial t} = D\nabla^2 u = D\left(\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} + \frac{\partial^2 u}{\partial z^2}\right)$$

Doppler effect

$$f = \left(\frac{c + v_r}{c + v_s}\right) f_0$$

```
from PIL import Image

# image processing of the runway
im=Image.open('ORD - runway.png')
whitethreshold = 240
blackthreshold = 20
print 'white threshold: ' + str(whitethreshold) + ' black threshold: ' + str(blackthreshold)
black_runway=0
white_runway=0
grey_runway=0
for pixel in im.getdata():
    if (pixel[0]<=blackthreshold and pixel[1]<=blackthreshold and pixel[2]<=blackthreshold):
        black_runway+=1
    elif (pixel[0]>=whitethreshold and pixel[1]>=whitethreshold and pixel[2]>=whitethreshold):
        white_runway+=1
    else:
        grey_runway+=1
print ('black=' + str((black_runway/float(black_runway+white_runway+grey_runway))))+', white='+str((white_runway/float(black_runway+white_runway+grey_runway))))

# image processing of the terminal figure
im=Image.open('ORD - terminal.png')
whitethreshold = 240
blackthreshold = 20
print 'white threshold: ' + str(whitethreshold) + ' black threshold: ' + str(blackthreshold)
black_terminal=0
white_terminal=0
grey_terminal=0
for pixel in im.getdata():
    if (pixel[0]<=blackthreshold and pixel[1]<=blackthreshold and pixel[2]<=blackthreshold):
        black_terminal+=1
    elif (pixel[0]>=whitethreshold and pixel[1]>=whitethreshold and pixel[2]>=whitethreshold):
        white_terminal+=1
    else:
        grey_terminal+=1
print ('black=' + str((black_terminal/float(black_terminal+white_terminal+grey_terminal))))+', white='+str((white_terminal/float(black_terminal+white_terminal+grey_terminal))))

#total runway area as the input (in feet)
runway_area = 7500*150 + 7500*150 + 9686*200 + 7967*150 + 13000*150 + 10801*200 + 7500*150 + 8075*150
#terminal area calculation
terminal_area = runway_area * (black_terminal+grey_terminal) / (black_runway+grey_runway)
print "total terminal area = " + str(terminal_area) + " square feet"
```

ALTERNATIVE MARKETS

CINEMAS

MALLS

SUBWAYS

Why it has not been done before ?

Infrastructure Issues

Analysts believe requiring a checkpoint just to enter the airport can create new targets.

Psychological Issues

Battling traveler anxiety about terror, versus the safety and security of those customers.

Evolution of Sensor Technology

Advances in sensor technology leads to ubiquitous deployment of large-scale wireless sensor networks

What have people said about our Idea ?

David Cush,
President and Chief Executive Officer
Virgin America

- Excellent Idea
- Easy to work with government authorities like TSA then private agencies

Virginia Buckingham,
Former Executive Director and CEO
Massachusetts Port Authority

- Government and Agencies do not generally act proactively in such situations, TSA came into existence after 9/11

Thank you
